27 Jan 69 / Janet

Sooty Tern Chicks

1033-05101-500

Protutalis flavescens

27 Jan Janet Dragonflies

Three cisterns which hold fresh stagnant water are situated in the center of the island (some as referred to by J.B. Jackson in paper).

Approx. 25 dead adults were noted in the cistern (possibly the adult ♀♀ did after depositing eggs). About 100+ cast off skins of dragonfly nymphs were noted about the edge of the pools and at the least one young adult fly in which the tibiae had only half unfurled. ~~The above was~~ dead, one adult Pantala

Red.
Flavescens? was
caught flying about
the people.
